📍 Mavelikara, Alappuzha, Kerala – 690505

PROFILE

Frontend-focused Computer Science undergraduate who builds responsive, component-based web applications with React.js, Next.js, and Tailwind CSS. Translates Figma design systems into production-grade user interfaces, integrating REST APIs and Firebase for real-time data, and using Vite and Framer Motion for fast, polished front-end delivery. Pairs hands-on engineering with UI/UX design sensibility, leading design-to-engineering collaboration across multiple student technology organizations. Award-winning builder – placed 2nd at Hackathon Astra (Carmel Polytechnic College) and 3rd at BrainHack'26 – with a track record of shipping full-lifecycle software under tight timelines.

EXPERIENCE

MuLearn Foundation & The Purple Movement

UI/UX Core Team Member & UI/UX Developer

Dec 2025 – Jun 2026

Thiruvananthapuram, Kerala

Hybrid

- Lead UI/UX initiatives across global and regional community products, translating design systems into front-end implementation guidelines and driving cross-functional design-to-engineering collaboration.

IEEE EMBS Pune Chapter

Research & Engineering Intern | [Certificate](#)

Mar 2026 – Jun 2026

Remote

- Owned visual and frontend technical architecture for digital research projects, resolving UI implementation bottlenecks through logic-driven, full-lifecycle engineering practices.

MuLearn SBC – Campus Chapter

Technical Associate & Former UI/UX Interest Group Lead

Aug 2025 – Present

Sree Buddha College of Engineering, Pattoor

- Lead technical development pipelines and mentor peers campus-wide; organized multiple UI/UX and front-end prototyping bootcamps that lifted engagement and technical literacy.
- Reached an elite μ Learn Karma Score of 30,000+ through sustained skill-building leadership.

IEEE SB SBCE

Membership Development Coordinator & Program Coordinator

Jun 2025 – Present

Sree Buddha College of Engineering

- Direct membership lifecycle operations and cross-functional event committees, coordinating multi-tier technical programs across the department.

TinkerHub SBCE

Tech Team UI Designer

Sep 2025 – Jan 2026

Sree Buddha College of Engineering, Pattoor

- Designed high-fidelity, developer-ready prototypes for the open-source tech squad.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science & Engineering 2023 – 2027 (Expected)
Sree Buddha College of Engineering, Pattoor – APJ Abdul Kalam Technological University

- Active leadership roles across IEEE SB and MuLearn campus ecosystems, including Membership Development Coordinator and Technical Associate.

Higher Secondary Education – Computer Science Stream 2021 – 2023
Central Board of Secondary Education

- Built foundational knowledge in computing architecture, logic, and primary programming syntax.

TECHNICAL PROJECTS

μLearn SBC – Official Campus Chapter Website | [View Project](#)

- Built the full front-end architecture and UI for the official campus chapter website, translating Figma design systems into a responsive, component-based React interface.
- Implemented reusable UI components and animated transitions with Framer Motion, styled with Tailwind CSS and bundled with Vite for a fast, production-ready build.
- **Stack:** React.js, Vite, Tailwind CSS, Framer Motion

Mileage Undo – AI-Driven Web Utility | [View Project](#)

- Built an interactive React web interface for a mileage calculator, styled with Tailwind CSS and bundled with Vite.
- Integrated AI API calls into the frontend to generate dynamic, LLM-driven feedback based on user input.
- **Stack:** React.js, Tailwind CSS, AI APIs, Vite

TalentPilot – Offline Resume Analysis Desktop App | 3rd Place, BrainHack'26 3 Aug 2026

- Built a fully offline desktop app, as part of team *Aimless* (SBCE), analyzing CVs using a locally-run LLM (Gemma) – zero API cost in development and use.
- Won **3rd Place** at BrainHack'26, hosted by College of Engineering Adoor (CEA), against teams including 1st – Anomaly (TKMIT) and 2nd – 404 Not Found (CEA).
- **Stack:** Tauri, Python, Gemma (Local LLM)

DarkNetra – Hybrid Phishing Detection System & Telegram Bot | [View Project](#)

- Built a full-stack security app classifying malicious links via trained ML models, with a Telegram bot for real-time accessibility.
- **Stack:** Python, Flask, ML Models, Telegram Bot API, Vercel

SKILLS

- **Frontend:** JavaScript (ES6+), React.js, Next.js, HTML5, CSS3, Tailwind CSS, Vite, Framer Motion, REST APIs
- **UI/UX:** Figma, Responsive Web Design, Component-Driven Design, Wireframing, High-Fidelity Prototyping, User Experience Design (UED)
- **Backend & Tools:** Node.js, Python, Flask, Firebase, Tauri, Flutter, Git, GitHub, Vercel, Netlify, Postman, Telegram Bot API
- **Competencies:** Rapid Prototyping, AI-Assisted Development, Cross-Functional Collaboration, Technical Leadership
- **Certifications:** NPTEL Elite Grade – The Joy of Computing using Python (70%+) | [Certificate](#)

AI TOOLS

- **AI-Assisted Coding:** Antigravity, GitHub Copilot, OpenAI Codex, Claude
- **Design & Prototyping:** Google Stitch, Nano Banana
